SKILLS

- DevOps experience
- Knowledge of kubernetes
- Linux and unix administration
- Experience with monitoring tools
- Server architecture comprehension
- Cloud infrastructure understanding
- Configuration Management
- Infrastructure As A Code
- Infrastructure automation
- Microservices architecture
- DevSecOps principles
- Network security understanding
- Experience with docker
- Infrastructure scaling insights
- Scalability strategies
- Agile methodology experience
- Knowledge of ansible
- Excellent on-call responsiveness
- Incident Management
- Python programming
- Disaster recovery planning
- Innovative mindset
- Application performance monitoring tools
- Network security expertise
- Deployment coordination
- Containerization
  Kubernetes

PROFILE

DevOps and Site Reliability Engineer with **8+ years of experience** specializing in cloud infrastructure, Kubernetes platforms, and scalable microservices environments. Extensive experience in **AWS cloud architecture, Kubernetes (EKS), CI/CD pipelines, infrastructure as code, and observability platforms**.
Strong background in operating high-traffic e-commerce systems with focus on **high availability, performance optimization, security, and cost efficiency**. Experienced in implementing modern observability stacks using **Grafana, Prometheus, Loki, and OpenTelemetry**, and building automation frameworks for infrastructure provisioning and deployments.Recognized for improving platform reliability, reducing operational overhead through automation, and enabling faster and safer software delivery across engineering teams.

WORK HISTORY

SRE/Devops Engineer 03/2024 - current
Mumzworld - Dubai, UAE

- Designed and operated highly available **AWS cloud infrastructure and Kubernetes (EKS) platforms** supporting large-scale e-commerce workloads.
- Built and maintained **CI/CD pipelines (GitHub Actions, GitLab CI)** to automate application deployments and improve release reliability.
- Implemented **observability and monitoring using Grafana, Prometheus, Loki, and OpenTelemetry**, improving system visibility and reducing incident response time.
- Automated infrastructure provisioning using **Infrastructure as Code (Terraform / Helm / CloudFormation)** to ensure scalable and consistent environments.
- Led **cloud cost optimization initiatives**, optimizing compute resources and savings plans to significantly reduce infrastructure costs. Reduced AWS infrastructure cost by **40% through optimization and savings plans.**
- Strengthened platform reliability and security by implementing **SRE practices (SLIs/SLOs, incident management, capacity planning) and resolving critical VAPT security findings.**
- Implemented **proactive monitoring, alerting, and observability dashboards** using Grafana, Prometheus, and log aggregation platforms, significantly improving incident detection and **reducing service downtime by 70%**.

Devops Engineer 09/2022 - 02/2024
Western International Group LLC - Dubai, UAE

- Managed cloud infrastructure and DevOps operations for **13–16 web and mobile applications** across e-commerce and loyalty platforms, ensuring high availability and reliable deployments.
- Designed and implemented **CI/CD pipelines using Jenkins and GitHub Actions**, automating build, testing, and deployment processes to

- Linux Operating System
- Infrastructure Management
- Databases
- NoSQL
- Automation

PERSONAL DETAILS

Date of Birth / Age: 25/07/1995
Nationality: Indian
Marital status: Married
Visa status: Employment visa

accelerate release cycles.

- Automated infrastructure provisioning using **Infrastructure as Code (Terraform and Ansible)** to create consistent, scalable, and repeatable environments.
- Implemented **application monitoring and alerting using New Relic**, enabling proactive issue detection and significantly reducing system downtime.
- Implemented **autoscaling and load-balancing strategies** to handle peak traffic and improve application performance and resilience.
- Led efforts to **modernize monolithic applications into microservices architecture**, improving scalability, maintainability, and deployment flexibility.

Cloud Engineer 09/2018 - 08/2022
Al-kabeer - Dubai

- Led the **migration of on-premises infrastructure to AWS**, enabling scalable, highly available cloud environments and improving operational efficiency.
- Designed and implemented cloud infrastructure using **Infrastructure as Code (Terraform / automation tools)** to ensure consistent and repeatable deployments.
- Performed **AWS service evaluation and cost analysis** to select optimal services and architectures based on performance, scalability, and cost efficiency.
- Implemented **monitoring and performance tracking for cloud workloads**, ensuring high availability and faster incident resolution.
- Conducted **root cause analysis and infrastructure improvements** to resolve recurring system issues and enhance platform stability.

Software Developer 06/2017 - 08/2018
Datagames - Pune

- Utilised object-oriented programming principles in everyday tasks, resulting in cleaner code creation.
- Developed robust code for various applications, enhancing overall system performance.
- Optimised software systems by identifying and resolving bugs.
- Collaborated with clients to clarify requirements and deliver tailored solutions.
- Supported all phases of development lifecycle, enhancing client satisfaction.

EDUCATION

BE: Computer science Engineering, 01/2013 - 01/2017
Mumbai University - Ratnagiri, India

CERTIFICATIONS

- AWS certified solution Architect - Associate
- 2022 December

KEY ACHIEVEMENTS IN MY CAREER

- Reduced **AWS infrastructure costs by ~40%** through compute savings plans, resource optimization, and architecture improvements.
- Reduced **platform downtime by 70%** by implementing proactive monitoring and alerting using **Grafana, Prometheus, and centralized logging**.
- Led infrastructure reliability initiatives supporting **high-traffic e-commerce events such as Black Friday**, ensuring platform stability during peak demand.
- Successfully resolved **71 security vulnerabilities (6 critical, 26 high, 39 medium)** identified during VAPT assessments.
- Migrated legacy **on-premise infrastructure to AWS**, improving scalability, reliability, and operational efficiency.
- Automated infrastructure provisioning and deployments using **Terraform, CI/CD pipelines, and Kubernetes**, reducing manual operations and deployment risk.
